Abstract (en)

This loom for the double-piece production of velvets, carpets and the like, including long-pile production, is characterised by a weft-carrier element (G, T) arranged to traverse the various warp yarns (A,B,C,D) in accordance with the sequences established by the movement of heddles, at different levels (L', L'') imposed cyclically on said weft-carrier element (G, T) by lifter means (Q) coordinated with the other means which implement the warp yarn traversing and heddle raising movements.
