Abstract (en)  
[origin: EP0362560A2] The invention relates to a lock (3) which is actuatable from the outside of a door or the like and which is connected via a coupling rod (12) or the like to a closing device (14) located on the outside of the door, and, to increase security against break-ins, proposes that the coupling rod (12) should pass through a channel (22) assigned a channel-closing jaw (28) which, spring-loaded in the closing direction, is supported on the coupling rod (12). <IMAGE>
