Abstract (en)
[origin: EP0362581A1] Packaging made from cardboard for the packing of a number of articles (60) which have at least one cavity (64) in the lower region, the packaging being formed from a wrapping (20,30,40,50) which encloses the articles and has fastening means which engage in the cavities. The fastening means (100) has at least one flap (102) which is punched out of the bottom wall (50) of the wrapping, the flap (102) having a central section (112) which is connected to the bottom wall (50) by means of a first fold line (104) and which is at least approximately the same size as the cavity (64) and on which two side sections (114,116) are arranged, which are situated on both sides of the central section (112) and are connected to this latter via two further fold lines (118, 120) which form an angle with the first fold line (104) of preferably less than 90 degrees, and the two side sections (114,116) having a length (L) which is greater than the height (M) of the central section measured perpendicularly to the fold line (104). <IMAGE>
