Abstract (en)
A high tension cable device which has an ignition plug fitted at one end thereof and connected to a power source side at another end portion thereof to apply a high voltage to the ignition. The device comprises a dividable plug cap attached to the ignition plug; an empty chamber defined within the dividable plug cap, with the empty chamber having first and second longitudinal ends and being adapted to receive an additional function part therein; a first electrode terminal provided at the first longitudinal end for connection with the high tension cable; and a second electrode terminal provided at the second longitudinal end for connection with the ignition plug, with the first and second electrode terminals defining a series gap therebetween.
