Abstract (en)
[origin: EP0363946A2] The invention relates to a device for counting and sorting coins, having a coin plate 3 which can be driven by a crank handle 12 or an electric motor M, having a guide track 4 for the coins 23 which tangentially adjoins the coin plates, and having a rocker 6 arranged above the guide track and on which a transport belt 7 for the coins 23 is mounted by means of two deflection rollers 8, 9. In order that the rocker 6 in the swung-up state completely releases the guide track 4 and that a simple construction of the rocker 4 is possible and furthermore that only a short gear path from the crank handle 12 or the electric motor M to the transport belt 7 is necessary, it is provided according to the invention that the rocker bearing 5 is arranged on the side of the coin plate 3 which is opposite the guide track 4 and that, as the gear, a belt drive 18 is provided having a belt which is clampable when the rocker 6 is swung down. <IMAGE>
