Abstract (en)
[origin: EP0363949A1] A transportable roof with gravel covering, an attic which can be placed in front, and devices for all-round roofing ventilation, is improved in that the underside (11) of the roof is designed to be plane and, in the region of the supports (14), has a groove (36) running around into which there engages a leg (35) of a section (34) which is arranged running around on the side of the support and which, at the other end, projects into a gutter (21) formed by the attic (20). In addition, in such a roof (10) with screw-on attic (20), starting from its periphery (16) or its edge surround (12), there are recesses (18) which connect downwardly to an inner space of the building and end at the top in the form of a slot (18a), the latter being overlapped by the attic (20). <IMAGE>
