Abstract (en)  
[origin: EP0363957A2] The subject of the invention is a mechanical locking device consisting of a lock and a key. The lock includes a releasable bolt (2) with an insertion head (5). Formed on the side face of the insertion head (5) is at least one longitudinal rib (7), the cross-sectional profile of which corresponds to that of code recesses (8) in code fixers (6) which are arranged in the housing (1) so as to be displaceable transversely relative to the insertion head (5). Each code fixer (6) has at least one additional recess (9), the width of which corresponds to the cross-sectional profile of the longitudinal rib (7) and the depth of which is smaller than the height of the longitudinal rib (7). <IMAGE>
