Abstract (en)

The present invention relates to a method and a device for logging non-eruptive production wells. <??>The process is characterised in that the well is activated in order to bring about the production of effluents, on either side of first measuring means (10), and in that the said measuring means (10) are used to treat at least a part of the effluents originating from the upstream side (18) of the flow, relative to the said measuring means (10).

Abstract (fr)

- La présente invention concerne un procédé et un dispositif de diagraphie en puits de production non éruptif. - Le procédé se caractérise en ce que l'on active le puits pour provoquer la production d'effluents, de part et d'autre de premiers moyens de mesure (10) et en ce que l'on traite par lesdits moyens de mesure (10) une partie au moins des effluents provenant de l'amont (18) de l'écoulement, relativement auxdits moyens de mesure (10).
