Abstract (en)
[origin: EP0364657A2] For the adjustment of the projection of a cleaning wire (6), provided at the forward end of a falling weight (15), over the forward end of the writing tube (2) of a tubular writing pen tip, a bush element (16) having a shoulder region (17) is fixed in clamping fashion on the falling weight (15). For the adjustment of the projection of the cleaning wire (6), the shoulder region (17) is brought to bear against a stop region (9) so that the falling weight (15) is situated in its forward position. By displacement of the bush element (16) along the falling weight (15), the correct projection is obtained. Thereafter, the bush element (16) can be firmly connected to the falling weight (15). <IMAGE>
