Abstract (en)

[origin: EP0364719A2] A process and an apparatus for forming green tiles by cutting an extruded clay strand are described, in which process a cutting means is held in a cross-slide which can be moved in a reciprocating manner transversely to the extruded clay strand and is supported by a longitudinal slide which can be moved in a reciprocating manner along the extruded clay strand, and in which the strand is cut by driving said slides. So that different cutting shapes can be set in a simple manner, the feed rate of a longitudinal slide is varied relative to the strand speed as a function of a desired cutting shape. <IMAGE>
