Abstract (en)

[origin: EP0364776A2] A drawing device having a plate-shaped drawing base in the form of a drawing board (1) and a straightedge element in the form of a drawing rail (10) has a length-measuring device which has a sensing device (20), mounted on the drawing rail and having two magnetic-field sensors, and also a strip (7) which is provided on the drawing board (1), is made of a material alternately magnetised positively and negatively in the longitudinal direction and is adjacent to the sensing device (20). The two magnetic-field sensors of the sensing device (20) lie side-by-side in the direction of the longitudinal extent of the strip (7) and at the same distance from the bearing plane of the drawing rail (10). They are in each case arranged in a branch of a Wheatstone-bridge circuit. <IMAGE>
