Abstract (en)  
[origin: JPH02164309A] PURPOSE: To easily assemble and disassemble a table by setting and rotating a lock lever that can rotate around an axis on a supporter to bring a tightening lever into the connecting state for connection and to release connection with the receiving opening for disconnection. CONSTITUTION: A table plate supporter 1 is connected to supporting members 3 and 4 formed as lateral beams of the lower frame with the aid of the connection mechanism. The axis line 9 forms the rotating axis line for lock lever 8. The tightening lever 16 and 17 extend in parallel to the table plate supporter 1. The outer ends of the tightening lever 16 and 17 can move separately or jointly. In releasing connection the lock lever 8 is rotated in the direction of 20a.
