Abstract (en)

[origin: EP0364872A2] The object of the invention is an anti-theft device for compact discs, and the like, in which each compact disc is preferably snappingly inserted into the respective disc-carrying frame (1), which by means of two coaxial, disc-carrying frame side pins (5, 6), is pivotably fitted between the sides (8, 9) formed with holes (18, 19), of a channel-shaped disc-carrying frame support (7) preventing a compact disc from being drawn out of the respective disc-carrying frame (1). The disc-carrying frames (1) are constrainable in the said support (7) by means of a bolt member (16) which is slidably fitted in one side (8) thereof, and is alternately movable by means of a lock (12), into a disc-carrying frame releasing position, and into a disc-carrying frame constraining position.
