Abstract (en)

[origin: EP0365424A1] Apparatus for storing and dispensing articles, such as cans, packs or similar articles of parallelipipedic or cylindrical shape, characterised in that the pusher (9) consists of a pallet (25) extending across the aisle (6) between two successive partitions (7) delimiting the same aisle (6), each partition (7) possessing respectively an upper (17), lower (18), front (19) and rear (20) groove on its four upper (13), lower (14), front (15) and rear (16) edges, each of these grooves being delimited laterally by a wall (21), on one of which slides the auxiliary body (27) which has the general form of a rectangular plate (28) arranged vertically according to its length and having, at the location of each of its upper and lower horizontal sides, a U-shaped slot (29) formed by two plates mounted square with one another so as to form a horizontal slideway (30) straddling respectively the upper and lower ridge of the said wall (21) of the partition (7), to form the members for guiding the pusher (9). <IMAGE>
