Abstract (en)

[origin: EP0365750A2] In a conveying apparatus, especially for transporting lap rolls to combing machines, with a gripper device which is held by means of a lifter on a trolley of a crane bridge moveable on a crane track by means of end undercarriages, on the two undercarriages there are means for detecting their relative position on the crane track which are connected to a control of the travel motors which contains means for detecting deviations between the positions of the undercarriages and which, when a deviation is detected, carries out a compensation by allowing the travel motor of one of the two undercarriages to run. <IMAGE>
