Abstract (en)
[origin: EP0365753A2] The invention discloses a new spray mechanism for the fine atomisation of liquids by means of a hydraulically acting pump (1). An essential feature of this spray mechanism is the motor output shaft (5) of the gear motor (6), which, under the effect of a wrap spring (3) drives an eccentric (2). This eccentric is connected to a coupler (4) which is in drive-connection with the piston (19) of the pump (1). <IMAGE>
