Abstract (en)
[origin: EP0365936A2] In a cabinet arrangement having insertions (4) and support walls (1) for the latter, the support walls (1) having support rails (2) extending over their depth, between which guide grooves are constructed, in which engage resting edges (15) of the insertions resting on the top sides of the support rails (2) and being supported by the latter, for increasing the certainty that an insertion (4) will not unintentionally be pulled out in total without complete support, it is proposed that the support rails (2) and the resting edges (15) of the insertions (4) are provided with shapings (11, 12, 17a, 30a, 18, 19) engaging in one another. <IMAGE>
