Abstract (en)
The present device concerns a small-size antenna for radio telephone. The antenna comprises two parallel, mutually spaced plates (21,22), the first plate (21) being electrically conductive and the second plate (22) being e.g. a glass fibre circuit board of which one surface is metal-coated and on the other surface, facing the first plate (21), are disposed second or higher-order matching circuits (S) implemented with separate components.
