Abstract (en)

[origin: EP0366441A2] A food item cutting apparatus, having a housing (10) including a food inleet port (12) and food outlet port (14), a first row of reciprocatable knives (16) oriented with their cutting edges facing the food inlet port and disposed inside the housing on a plane between the food inlet port and the food outlet port and a second row of reciprocatable knives (20), also oriented with their cutting edges facing the food inlet port, on a plane substantially parallel to the first row of reciprocatable knives and positioned between the first row of knives and the food outlet port, the axis of the second row of knives are oriented at an angle to the axis of the knives in the first row. The apparatus also includes a cutter (24) disposed in a plane between the second row of knives (20) and the food outlet port (14), adapted to be driven in a direction substantially perpendicular to a line joining the food inlet port to the food outlet port. The cutting means (24) are arranged for movement in a direction transversely to the axes of the second row of reciprocatable knives (20), and at least one electric motor (50) arranged to drive the knives and the cutter.
