Abstract (en)
[origin: EP0367092A1] A carton whose opening part can be covered airtightly after it is opened. A carton body is provided with an inner half notched line (3) cut as deep as half the thickness of a wall plate of the carton body in the inner surface of the wall plate in the form of an opening and an outer half notched line (4) cut as deep as half the thickness of the wall plate in the outer surface thereof so as to surround the outer periphery of the inner half notched line. A pull tab (5) is stuck onto the side of the wall plate in such a manner as to cover the outer half notched line and also provided with a peelable portion (10) and an unpeelable portion (11). When the peelable portion is peeled off, the outer portion (18) enclosed with the outer half notched line and the inner portion (19) enclosed with inner half notched line are torn off the wall plate to form the opening part (20). The opening part is airtightly covered by sticking the pull tab to the wall plate again.
