Abstract (en)

[origin: EP0367726A1] The device according to the invention to compensate for the deflection of the winding mandrel (5) of a winding machine (1), having a tacho-roller (7) mounted in a vibration-damped manner arranged so that it can be pressed radially onto the bobbin surface, has a mounting for the tacho-roller (7), which mounting consists of a journal (17) attached to the yoke (11) bearing the tacho-roller (7), which journal engages in a bore hole (21) on the support (19) and is connected in a torsionally elastic manner by O-rings (23) on the surface of the journal (17) in the bore hole. <IMAGE>
