Abstract (en)

[origin: EP0367840A1] A process for producing a high-purity, non-infectious antihaemophilia factor (AHF or factor VIII) from blood plasma by treating a fraction enriched with factor VIII with biocompatible organic solvents/detergents followed by further cleaning steps is characterized in that the fraction enriched with factor VIII is obtained by a chromatographic process. After removal of viruses, said fraction advantageously undergoes further gel permeation chromatography with ion-exchange materials.
