Abstract (en)
[origin: EP0367841A1] A profiled body for lining the facades of buildings and the like is to be specified, which profiled body can be laid as weather boarding and whose parts subject to particularly high mechanical and climatic stress are designed to be appropriately resistant. <??>The lining profile (1) has a wall thickness constantly increasing from one (3) to the other (2) longitudinal edge. It has greater density at the longitudinal edge having the greater wall thickness (2) and is provided with an adherent protective coating on its surface. <IMAGE>
