Abstract (en)
[origin: EP0367900A1] A seat element for arrangement in a row for the seating of halls, stadiums, galleries and the like, the seat element (1, 2, 3) consisting of a seat part (5), which can, if appropriate, be connected to a common row attachment, and a backrest part (4), which is linked movably to said seat part and can be placed on the seat part in the covering position, is to be improved in respect of providing a compact arrangement of backrest part and seat part to improve the cleaning possibilities and to avoid obstacles by projecting backrest parts in cases of panic. According to the invention this is effected by the fact that the backrest part (4) is attached to the seat part (5) in such a way that, without forces acting to keep it upright, it automatically falls back into the covering position and thereby rests on the seat part (5). <IMAGE>
