Abstract (en)
[origin: EP0367948A1] The invention relates to a mixing device having a mixing container swivellable through 180 DEG between a starting position and a mixing position, the container part of which, permanently connected to the swivel shaft, has a suction device by means of which the possibly dust-laden gases present in the container after the mixing operation can be sucked off before the container is opened. A preferred further development of the invention permits the feeding of protective gas into the mixing container. <IMAGE>
