Abstract (en)

[origin: EP0367964A1] The ski according to the invention has a lightweight structure and is provided, in the vicinity of its front end, with a front inertia device (8). According to the invention, the front inertia device (8) is fixed and positioned in the vicinity of the front transverse contact line (5). It is preferably centred on said front transverse contact line (5) and extends over a given length on both sides of the line.
