Abstract (en)  
[origin: EP0368046A2] Railway transport wagon having a container delimited laterally by side walls (1), and having a conveyor-belt unit (3) running continuously in the region of the container bottom, conveying obliquely upwards in the longitudinal direction of the wagon from the loading end, and projecting above the buffers at the delivery end, the clear wall height (h) of the side walls (1) of the container being essentially identical over the entire length of the wagon. According to the invention, it is provided in such a transport wagon for the height difference ( DELTA H) of the conveying device (3, 8, 9) between loading end (4) and delivery end (5) to be essentially identical to the clear wall height (h) of the side walls (1) of the container, or to be larger than this wall height (h). <IMAGE>
