Abstract (en)
[origin: EP0368277A1] A buckle for use with a safety belt system has a locking mechanism to receive and retain a tongue (51) which is mounted on a safety belt. The buckle is provided with means (19) to release the locking mechanism to permit the tongue (51) to be withdrawn from the buckle. The buckle has means (45, 50) which are responsive to acceleration in at least one direction relative to the buckle which are operative to prevent the locking mechanism from moving to a release condition.
