Abstract (en)

[origin: EP0368294A2] It involves utilizing a plurality of resin systems with at least one having a veining pigment composition having a component with a specific gravity greater than that of the one resin system and a component with a specific gravity less than that of the one resin system. A further aspect of the present invention includes utilizing a plurality of resin systems and varying certain properties of the resin systems to achieve desired variations in design and surface texture of the finished synthetic surface.
