Abstract (en)

The assembly comprises a pair of plates (1, 3) solid to and spaced from one another, between which two pivots (5, 7) are interposed on which shaped elements (10, 14, 16, 17) are mounted to rotate about them; said shaped elements are able to be housed within the space between said two plates in closed position and are taken out from said space by a rotation about said pivots, thereby taking up relative positions defined to form, together with said plates, a predetermined figure.
