Abstract (en)

[origin: EP0369038A1] For swimming pools (1), in particular for swimming pools (1) having optional pool shapes, a roller blind type cover with buoyant plastic profiles is proposed which consists of at least two roller blind parts (27, 28) which float in different directions and can be wound on a common winding shaft (12) of a winding device. In this case, the winding device is arranged in such a way relative to the swimming pool (1) that the pool parts on both sides to be covered by the roller blind parts (27, 28) are situated inside the two vertical planes extending through the ends of the winding shaft (12) and at an angle of 90 DEG to their axis of rotation. <IMAGE>
