Abstract (en)
[origin: EP0369058A1] There is described a bracket positioning for fittings, especially for pivot and corner bearings on leaves of windows, doors and the like, in which the milled-out recesses required for receiving the respective fitting carriers are each provided only in one either horizontal frame or vertical frame spar, and the complete receptacle for the respective fitting carrier is obtained by the mortise-and- tenon joining of horizontal frame spars and vertical frame spars. <IMAGE>
