Abstract (en)

[origin: EP0369151A1] In order to fasten a monobloc injection pump (2) comprising a pump housing (5) and a head housing (13) on a stepped bore (6) of the cylinder head (1) in such a way that leakage points, which can arise between the pump housing (5) and the head housing (13) when the monobloc injection pump (2) is clamped down, are avoided, it is proposed that the head housing (13) have projections (20) on two opposite sides, on which clamp clips (22) pulled downwards by a clamp bolt (24) rest, the end parts (23) of the clamp clips (22) resting on the projections (20) of two adjacent monobloc injection pumps (2, 3) in each case. <IMAGE>
