Abstract (en)
[origin: EP0369726A2] A tray (1) of plastics material formed by vacuum moulding comprises a plate member (2) having a downwardly extending peripheral wall (5) comprises a plurality of glass holding recesses (8), a change holding recess (12) and a pad supporting surface (10) in a relatively shallow recess (22). Protuberances (17), (28) and (40) corresponding to the recesses (8), (22) and (12) extend from the bottom surface (4) of the plate member (2). Side walls of the recesses (8), (22) and (12) converge downwardly from the plate member (2) so that the protuberances (17), (28) and (40) may engage corresponding recesses (10), (22) and (12) to permit like empty trays to be nested one within the other.
