Abstract (en)

[origin: EP0369911A1] Floating door for a mixed-mode cooking enclosure combining microwave cooking and conventional cooking via electrical resistors, comprising at least one wave choke device (1) integral with the floating part of the door referred to as the shield-door. Advantageously the shield-door is formed from an exterior frame (4), the central zone of which is perforated, and on which is fixed the wave choke device and a pyrolytic door seal (10). The invention is of interest to constructors of cooking enclosures. <IMAGE>
