Abstract (en)

[origin: EP0369912A1] The present invention relates to a device for sorting parts, in particular parts having different shapes and dimensions, characterised in that it essentially consists of a cylindrical receptacle (1) for receiving the elements to be separated and which has an opening (2) in its vertical wall, of a conical element (3) disposed under the cylindrical receptacle (1) forming the removable base of the latter, and driven in rotation and by a means (4) for regulating the spacing between the conical element (3) and the lower part of the wall of the cylindrical receptacle (1).<IMAGE>
