Abstract (en)
[origin: WO8911263A1] A shovel stretcher comprises novel materials in the region X (parts 1 and 4) which are permeable to X-rays. Only the end parts (2, 3) and the joining elements (31-35) are made of metal. The advantage is that both vertical and lateral X-rays can be taken of an injured person lying on the stretcher. This is particularly advantageous in the case of injuries to the spine.

Abstract (fr)
Ledit brancard en forme de pelle comprend des matériaux nouveaux dans la région X (parties 1 et 4), qui le rendent perméable aux rayons X. Seules les parties terminales (2, 3) et les éléments de jonction (31-35) sont en métal. Ledit brancard présente l'avantage de permettre de radiographier aussi bien verticalement que latéralement le blessé qui y est couché, ce qui est particulièrement avantageux dans le cas de lésions de la colonne vertébrale.
