Abstract (en)

[origin: EP0370385A2] The invention relates to a driver (1) for driving a position indicator against the switching shaft of a circuit breaker, which is constructed as a stamped metal part with a slidingly fitting recess (9) in the form of the switching shaft cross-section and is fixed in location in longitudinal direction on the switching shaft (2) in a slot (4) of a spacing sleeve (3). In this arrangement, the slot (4) is arranged perpendicularly with respect to the switching shaft axis and the spacing sleeve (3), which can be pushed on, is seated between two switching shaft clamps (5) of electrically insulating material on the switching shaft (2). <IMAGE>
