Abstract (en)

A device for hauling and striking the standing and running rigging in a fishing boat (1) such as a mussel cutter and the like, which boat is provided with a strikable mast with at least a boom (3, 4) and various striking and hauling winches, wherein the or each boom is attached pivotally to a foot console bearing the mast wherein the free end of the boom (3, 4) suspended on the masthead with a halyard is coupled to at least two tensioning cables leading in each case to a tensioning winch placed on the after deck and foredeck respectively, such that no movement of the boom relative to the deck will occur during setting down of the boom onto the deck after the further striking of the mast (2), which considerably reduces the forces on the mast construction during striking.
