Abstract (en)

[origin: JPH02174485A] PURPOSE: To accurately position a loop by providing each device with at least one hook including a supporting part for each loop fitting point and capable of fitting freely turnably the supporting part. CONSTITUTION: The device 1 for fitting the demagnetization loop is fitted to the head part of a screw 3 and the members of the device 1 are molded from a plastic material. A wire 1A is blocked between lingulate parts 18, 19 and lods 16, 17 so as not to be moved. Since hooks 18, 19 are arranged symmetrically about a bracket 10 and a base 9 and the bracket 10 has slight elasticity, the device 1 can be rotated around the axis of the screw 3. Since four deices 1 are arranged in the hexagon head direction of a cover, the demagnetization loop can be positioned in a sufficiently tense state only by inserting the loop into the inside of the four devices 1.
