Abstract (en)
[origin: EP0370995A2] In a profile roll-forming machine for producing hollow-profile strips (22, 23) of strip metal (17, 18) which can be used as spacers for insulating glass, having rotary-driven profiling tools (14, 15) which are designed as rolls and are driven by a gear block (6) having a plurality of output drives (8), one set (12, 13) each of profiling tools (14, 15) for producing profile strips (22, 23) is provided on both sides of the gear block (6). So that the profiling tools (14, 15) can be used alternatively, the gear block (6) and the sets (12, 13) of profiling tools (14, 15) attached to it are mounted on a table (1) so as to be displaceable transversely (arrow 4) to the conveying direction of the strip material (17, 18). <IMAGE>
