Abstract (en)
[origin: WO8912144A1] A substantially continuous copper-containing marine antifouling surface (7) is formed on a marine structure (5) by attaching thereto a composite comprising a plurality of strips of copper (1) (or copper alloy) mounted side-by-side on a support (2). The composite may be adhered to the structure or it may, for example, be applied to an uncured neoprene coating (4) on the structure which is subsequently cured.

Abstract (fr)
On forme une surface (7) d'antifouling marin sensiblement continue contenant du cuivre sur une structure marine (5), en y fixant un composite comprenant une pluralité de bandes de cuivre (1) (ou d'alliage de cuivre) montées côte à côte sur un support (2). On peut coller ledit composite sur la structure, ou on peut l'appliquer par exemple à une couche (4) de néoprène non durci sur la structure que l'on durcit ensuite.
