Abstract (en)
[origin: EP0371713A2] A stair-rod (10), preferably formed in three parts, includes spring means (28) so that the stair-rod can be fitted in place across the full width of a stair, between the side walls (12a, 12b), without the need for any fixing brackets. The stair-rod preferably has the spring means (28) at one end and a screw-thread adjustment mechanism (20,36) at the other end to assist in taking up any slack.
