Abstract (en)

[origin: EP0371835A1] The present invention relates to an electrical connection device. The device is characterised in that the housing (9) is joined to a supporting assembly (13, 14) by guide means (9a, 13a) extending perpendicularly relative to the plugging-in direction X-X' and is immobilised relative to the supporting assembly in a plugging-in position by at least one relatively flexible fastening member (16) passing through the guide means (9a, 13a) and allowing a movability of the housing (9) relative to the assembly (13, 14) in at least one direction perpendicular to the plugging-in direction. The invention is used especially in the sector of motor vehicles. <IMAGE>
