Abstract (en)
This method is notable in that a paper presented as a reel (B) of a width double that of the bag (S) to be obtained is used, the unwound web is separated into two equal widths (B1) (B2), the two half-widths are conveyed independently to the level where the folded compresses are supplied, the stacked compresses are advanced between the two half-widths of paper superposed one on the other, and then the cold sealing of the two superposed half-widths and the cross-cutting of the bags obtained are carried out, all this taking place continuously and automatically. <IMAGE>

Abstract (fr)
Ce procédé est remarquable en ce qu'on utilise un papier présenté en bobine (B) de largeur double du sachet (S) à obtenir, on sépare en deux largeurs égales (B1) (B2) la bande déroulée, on fait cheminer indépendamment les deux demi-largeurs jusqu'au niveau où sont amenées les compresses pliées, on fait avancer les compresses empilées entre les deux demi-largeurs de papier ramenées en superposition, puis on réalise le scellage à froid des deux demi-largeurs superposées et la coupe transversale des sachets obtenus, tout cela en continu et de manière automatique.
