Abstract (en)

[origin: EP0371926A1] There is disclosed a method for assembling and making a basin assembly for washing machines, which has been specifically designed for reducing the component elements of said assembly. More specifically, the assembling and making method provides that the component elements of the basin assembly are mutually coupled by seaming and riveting operations. The mentioned component elements, in particular, substantially comprise a tubular element (1) to which there are affixed a rear wall (2) as well as a rear flange (8) and a front flange (3). With these flanges coupling top and bottom elements (10, 11) and a closure ring element (14) cooperate.
