Abstract (en)
[origin: EP0372346A2] The multi-sectional shelving comprises a central part (R1) and two side parts (R2, R3). These have in each case an outline in the form of a right-angled isosceles triangle. The base area of each side part (R2, R3) is half as large as that of the central part (R1). Between the central part (R1) and the side parts (R2, R3) there are jointed connections (A, B) by means of which the side parts (R2, R3) can be swivelled between a position in which they bear with a cathetus against the hypotenuse of the central part (R1) and a position in which they bear with the hypotenuse against a cathetus of the central part (R1). <IMAGE>
