Abstract (en)
[origin: EP0372642A1] Outlet for hydromassage plant comprising a casing (12), an orientable nozzle (26) therein contained. The nozzle can, under water pressure action on flange (44), slide outwardly against opposing force of a spring (46), thus opening a passage for exiting water which entrains, by Ventury action, air through the check valve (58) of the axially located nozzle (52). In the absence of water pressure, nozzle (26) slides back onto (52) thus preventing water back flow.
