Abstract (en)  
[origin: JPH03114406A] PURPOSE: To enhance an efficient grip of hair and to protect the skin perfectly by arranging protecting blades on the plane perpendicular to the axis of a rotating drum and distributing them over the full length of the drum so that a virtual protective column is formed on the periphery of a depilatory roller formed by gripping jaws. CONSTITUTION: A pair of protecting blades are arranged between consecutive two pairs of gripping jaws 8a and 8b. A disk formed by a blade 12 is disposed so as to be positioned facing a dent existing between two rows of the ripping jaws 8a, 8b. This type blades are arranged over the entire length of the depilatory roller in a state so as to touch the skin, and form a virtual column around the depilatory roller so as to prevent the skin from getting into the depilatory roller. Consequently, while the blade is rotating, the gripping blades 8a, 8b are prevented from causing dangers such as pinching or injuring the skin.
