Abstract (en)
There is disclosed a coaxial cable for transmitting high frequency signals, comprising an inner conductor thereabout there is extruded a plastics material coating provided with two or more outwardly projecting legs adapted to perfectly center the inner conductor within a tubular plastics material element so as to enclose a comparatively great amount of air as a dielectric material. On the outside of the insulating tubular element there is arranged a second conductor, substantially parallel to the inner conductor, the assembly being enclosed by an outer coating, or protecting sheath made of PVC or any other suitable electrically insulating material.
